plan EU

EUROPEAN DIGITAL INDEPENDENCE

Do you know what your business actually runs on?

Plan EU maps your dependence on non-European software and service providers, and makes a concrete plan for when it matters.

THE CHALLENGE

Your continuity depends on decisions you do not make yourself

Email, documents, accounting, payments and hosting: many European organisations run almost entirely on services from providers outside Europe. That works, until a foreign law, a sanction or a business decision suddenly restricts a service.

01

Which services are critical?

Without which software would your organisation grind to a halt within a day?

02

Which law applies to them?

Where are your suppliers established and where is your data stored?

03

What sits behind your service providers?

Your accounting firm, IT provider or fund administrator also uses software. Which?

04

What do you do if it goes wrong?

Is there an exit plan, and can you really take your data with you?

Regulation already requires it. DORA obliges financial institutions to have exit strategies for critical ICT services. NIS2 and the GDPR require insight into your supply chain.

HOW IT WORKS

Five steps from uncertainty to a plan

Start with the scan at plan-eu.eu. No complicated questionnaires: short multiple-choice questions, tailored to your sector.

1

Domain

You enter your domain name. We map publicly visible services, such as email and hosting.

2

Sector

Based on your sector, we determine which regulation and which dependencies are relevant to you.

3

Questions per area

Office software, accounting, payments, communication, service providers: a few short questions per area.

4

Report

A rating on our risk scale for each area, with an explanation and European alternatives.

5

Exit plan and advice

A step-by-step plan for every non-European service. Want to go further? We take the research and the coordination off your hands.

● Sovereign	◐ Manageable	○ Vulnerable	■ Critical
European provider, data and management within the EU.	Non-European, but not business-critical or easy to replace.	Non-European and important to your operations.	Non-European, business-critical and hard to replace.

WHAT WE DO

From insight to switch

The scan gives you a first picture. After that, we help with the work most organisations have no time for.

Insight

Dependency report

A complete overview of your digital dependencies, classified by risk, with an explanation per area and European alternatives.

Supply chain

Supplier research

We collect the answers you need from your suppliers and service providers: sub-processors, data location, contractual exit arrangements.

Financial sector

DORA second opinion

An independent review of your register of information, your ICT contracts and your exit strategies for critical or important functions.

Preparation

Tailored exit plan

A worked-out plan for each critical service: data export, alternative, lead time, contract and an emergency scenario for the first 48 hours.

Execution

Guidance when switching

Choosing a European alternative? We guide the selection and put you in touch with experienced firms that carry out the migration.

Assurance

Periodic review

Suppliers, legislation and your organisation change. We help keep your overview and exit plans up to date.

FOR WHOM

For every European organisation that takes its continuity seriously

Financial institutions

Banks, insurers, investment firms and fund managers under DORA, including the chain of administrators, depositaries and compliance firms.

SMEs and family businesses

Organisations without their own IT department that want to know where they stand and what a realistic first step is.

Critical and public sector

Energy, transport, healthcare, logistics and public administration under NIS2, including connected equipment and vehicle fleets.

Why Plan EU

01

Independent

We do not sell software and receive no commission from suppliers. Our advice is in your interest.

02

Expert

We combine knowledge of European regulation (DORA, NIS2, the GDPR and the Data Act) with hands-on IT experience.

03

Pragmatic

Not everything needs to move to Europe. We start with what removes the most risk.

04

Careful with your data

The scan stores only what is needed for your report. We run on European infrastructure ourselves.
